This geometric wall planter is perfect for small houseplants such as succulents, cacti and trailing plants such as string of pearls and string of hearts. The planter has around 300 ml of volume, so plenty of space for roots to grow and for the soil to hold enough water. You can mount them on your wall in any pattern you like using the included template files, and they hook directly onto most standard screw heads. There are drainage holes in the bottom, in case too much water is added - most plants don't like poorly drained pots so allow any excess water to drain from the soil when watering. Just make sure the planter doesn't drain directly over anything important or electronic and hold a container under it while you water if you're unsure.

Thank you for your generous tips, they are always very much appreciated and allow me to spend more time working on cool projects to upload.
